

Prozyta™ Fish

Probiotic for fish ponds

Prozyta™ Fish is a multi-strain consortium of probiotic strains, including Kemin's patented strain of *Bacillus subtilis* PB6 and *Bacillus pumilus*, for better management of water quality and degradation of organic sludge.

FEATURES

- Probiotic strains in Prozyta™ Fish helps maintain optimal bloom and water quality
- Aids in preventing the formation of toxic gases like ammonia, nitrite and hydrogen sulfide by degrading the organic sludge in the pond bottom
- Inhibits pathogens through competitive exclusion and production of antibacterial compounds

BENEFITS

- Enables improvement of water and soil quality
- Aids the degradation of sludge and organic matter
- Helps to reduce the formation of ammonia and nitrite

INSTRUCTIONS FOR USE

- Pond preparation: 1 kg/acre
- During polluted condition: 1.5 kg/acre
- Mix the product with sufficient pond water and apply it gently

For more information, consult a Kemin AquaScience™ technical expert
